Pathway in Enterprise Systems Engineering (PENS)

Intership Model (SU)

University of Sousse

Sept, 2019

Different Internship models

- 2 kind of students

- Bachelor (ISSATSO and ISG) and engineers (ISSATso)

Engineers

- Internships (Mandatory)
    - 1 month in summer first year
    - 2 months in summer second year
    - 4 Months for the third year (end of studies project).
    - Sometimes they get paid (500 euros for French companies)
    - Some tunisien companies do pay the Internship.

Bachelor degree

- Internships:
  - first year and second year (optional)
  - 4 Months for the third year (end of studies project) Mandatory

How students find internships

- Mainly take contact by themselves with companies (Tunisien as well as Europeen companies)

- They also take tests and might be selected upon their results out of the test.

- Usually they begin a kind of bootcamp about a technology or a set of technologies

Duties of the administration

- Official affectation of students to hosting companies

- Internships journal

- Sesame platform (for tracking the students)

Duties of the academics

- A supervisor for each end year project
- Review reports
- Review delivrables
- Help for preparing the presentation and speech.

- Participate for defence of the projects and for the internships for the first and the second year.
- This year we added a technical evaluation before the defence.

Trend of some companies

- Try to have students from their the second year.

- Engage them for the end year project (pre-employment contract)

- And then employment

My own remarks

- Topics are trending and might be very different from the courses delivered at ISSATSo.
